

Lab Report No. 05

Submitted By: Muhammad Musa

Registration No: 22pwcse2157

Section: Section C

“On my honor , as student of University of Engineering and Technology, I have neither given nor received unauthorized assistance on this academic work”

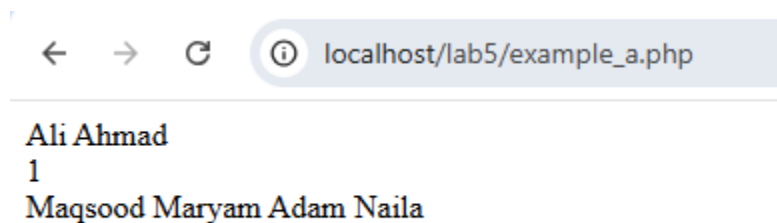

Department of Computer Systems Engineering
University of Engineering and Technology Peshawar

Lab 5:

Example a:

```
example_a.php
1  <?php
2
3  $username = "Ali Ahmad";
4  echo $username;
5  $mycount = 1;
6  echo "<br />".$mycount;
7  $team = array('Maqsood', 'Maryam', 'Adam', 'Naila');
8  echo "<br />".$team[0]." ".$team[1]." ".$team[2]." ".$team[3];
9  ?>
10
```

Results:

localhost/lab5/example_a.php

Ali Ahmad
1
Maqsood Maryam Adam Naila

Example b:

```
example_b.php
1  <?php
2  /* This is a section
3  of multiline comments
4  which will not be
5  interpreted */
6  ?>
```

Results:

Example c:

```
example_c.php
1  <?php
2  $test_var;
3  echo gettype($test_var) . "<br />"; // Displays "NULL"
4
5  $test_var = 15;
6  echo gettype($test_var) . "<br />"; // Displays "integer"
7
8  $test_var = 8.23;
9  echo gettype($test_var) . "<br />"; // Displays "double"
10
11 $test_var = "Hello, world!";
12 echo gettype($test_var) . "<br />"; // Displays "string"
13 ?>
14 |
```

Results:

Warning: Undefined variable \$test_var in C:\xampp\htdocs\lab5\example_c.php on line 3

NULL

integer

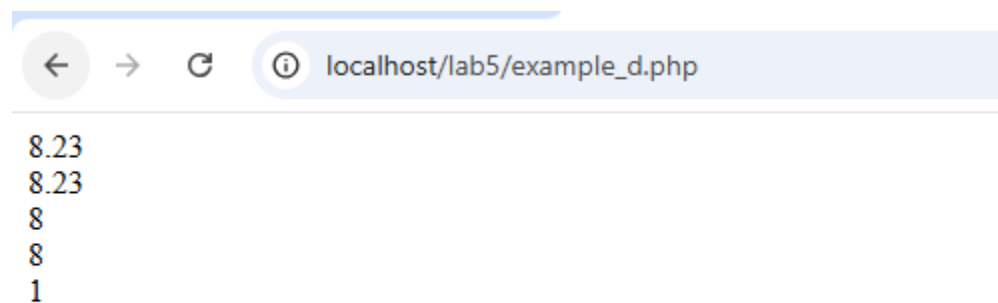

double

string

Example d:

```
example_d.php
1  <?php
2  $test_var = 8.23;
3  echo $test_var . "<br />";
4  settype($test_var, "string");
5  echo $test_var . "<br />";
6  settype($test_var, "integer");
7  echo $test_var . "<br />";
8  settype($test_var, "float");
9  echo $test_var . "<br />";
10 settype($test_var, "boolean");
11 echo $test_var . "<br />";
12 ?>
```

Results:

8.23
8.23
8
8
1

Example 5:

```
example_e.php
1  <?php
2  // Make sure $page is defined before using it, for example:
3  $page = isset($_GET['page']) ? $_GET['page'] : ''; // or assign some default
4
5  if ($page == "Home") {
6      echo "You selected Home";
7  } elseif ($page == "About") {
8      echo "You selected About";
9  } elseif ($page == "News") {
10     echo "You selected News";
11 } elseif ($page == "Login") {
12     echo "You selected Login";
13 } elseif ($page == "Links") {
14     echo "You selected Links";
15 } else {
16     echo "Page not recognized";
17 }
18 ?>
```

Results:

Example 6:

```
example_6.php
1  <?php
2  // Set the page variable (you can also use $_GET['page'] if taking from URL)
3  $page = isset($_GET['page']) ? $_GET['page'] : '';
4
5  switch ($page)
6  {
7      case "Home":
8          echo "You selected Home";
9          break;
10     case "About":
11         echo "You selected About";
12         break;
13     case "News":
14         echo "You selected News";
15         break;
16     case "Login":
17         echo "You selected Login";
18         break;
19     case "Links":
20         echo "You selected Links";
21         break;
22     default:
23         echo "Page not recognized.";
24 }
25 ?>
```

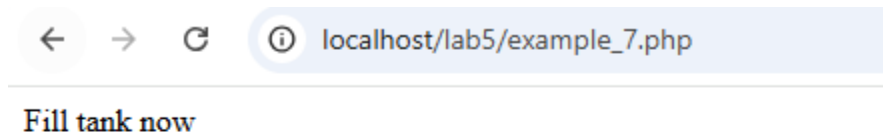

Results:

Example 7:

```
example_7.php
1  <?php
2  $fuel = 10;
3  |
4  echo $fuel <= 19 ? "Fill tank now" : "There's enough fuel";
5  ?>
6
```

Results:

A screenshot of a web browser window. The address bar shows the URL 'localhost/lab5/example_7.php'. Below the address bar, the text 'Fill tank now' is displayed, which is the output of the PHP script from Example 7.

Example 8:

```
example_c.php
1  <?php
2  $test_var= 7;
3  echo gettype($test_var) . "<br />";
4
5  $test_var = 15;
6  echo gettype($test_var) . "<br />";
7
8  $test_var = 8.23;
9  echo gettype($test_var) . "<br />";
10
11 $test_var = "Hello, world!";
12 echo gettype($test_var) . "<br />";
13 ?>
14 |
```

Selling a widget... done. There are 7 widgets left.
Selling a widget... done. There are 6 widgets left.
Selling a widget... done. There are 5 widgets left.
Selling a widget... done. There are 4 widgets left.
Selling a widget... done. There are 3 widgets left.
Selling a widget... done. There are 2 widgets left.
Selling a widget... done. There are 1 widgets left.
Selling a widget... done. There are 0 widgets left.
We're right out of widgets!

Example 9:

```
example_9.php
1  <?php
2  $authors = array("Steinbeck", "Kafka", "Tolkien", "Dickens");
3  foreach ($authors as $val) {
4      echo $val . "<br />";
5  }
6  ?>
7  |
```

Results:

Steinbeck
Kafka
Tolkien
Dickens

Example 10:

```

exaple_10.php
1  <?php
2  $myBook = array(
3      "title" => "The Grapes of Wrath",
4      "author" => "John Steinbeck",
5      "pubYear" => 1939
6  );
7
8  foreach ($myBook as $key => $value) {
9      echo "<dt>$key</dt>";
10     echo "<dd>$value</dd>";
11 }
12 ?>
13

```

Results:

title	The Grapes of Wrath
author	John Steinbeck
pubYear	1939

Example 11:

```

example_11.php
1  <?php
2  $width = 1;
3  $length = 1;
4  do {
5      $width++;
6      $length++;
7      $area = $width * $length;
8  } while ($area < 1000);
9
10 echo "The smallest square over 1000 sq ft in area is $width ft x $length ft.";
11 ?>
12

```

Results:

The smallest square over 1000 sq ft in area is 32 ft x 32 ft.

Example 12:

```
example_12.php
1  <?php
2  |  for ($count = 1 ; $count <= 12 ; ++$count)
3  |  echo "$count times 12 is " . $count * 12 . "<br>";
4  ?>
5
```

Results:

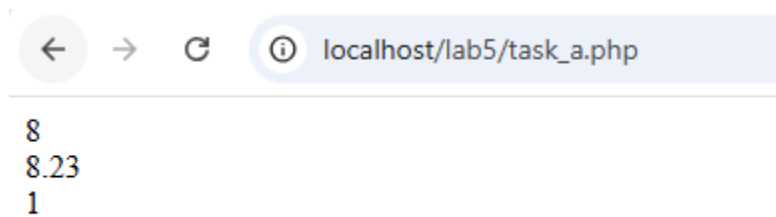

1 times 12 is 12
2 times 12 is 24
3 times 12 is 36
4 times 12 is 48
5 times 12 is 60
6 times 12 is 72
7 times 12 is 84
8 times 12 is 96
9 times 12 is 108
10 times 12 is 120
11 times 12 is 132
12 times 12 is 144

Task a:

```
task_a.php
1  <?php
2  $test_var = 8.23;
3
4  echo (int)$test_var . "<br />";    // Outputs: 8
5  echo (string)$test_var . "<br />"; // Outputs: 8.23
6  echo (bool)$test_var . "<br />";  // Outputs: 1 (true)
7  ?>
8  |
```

Results:

8
8.23
1

Task b:

- **intval(value)**

Purpose:

Converts the given value to an **integer** and returns the result.

- **floatval(value)**

Purpose:

Converts the given value to a **floating-point (decimal) number** and returns it.

- **strval(value)**

Purpose:

Converts the given value to a **string**.

Task c:

```
task_c.php
1  <?php
2
3  // Function to check if a number is prime
4  function isPrime($num) {
5      if ($num <= 1) return false;
6      if ($num == 2) return true;
7      if ($num % 2 == 0) return false;
8      for ($i = 3; $i <= sqrt($num); $i += 2) {
9          if ($num % $i == 0) return false;
10     }
11     return true;
12 }
13
14 $max = 10; // Change this if you want a bigger table
15
16 echo "<table border='1' cellpadding='8' cellspacing='0'>";
17 echo "<tr><th></th>";
18
19 // Header row: numbers 1 to $max
20 for ($header = 1; $header <= $max; $header++) {
21     echo "<th>$header</th>";
22 }
23 echo "</tr>";
24
25 // Generate division table with additional info
26 for ($row = 1; $row <= $max; $row++) {
27     echo "<tr>";
28     echo "<th>$row</th>"; // Row header
29
30     for ($col = 1; $col <= $max; $col++) {
31         $div = $row / $col;
32
33         // Determine odd or even for the numerator (row number)
34         $oddEven = ($row % 2 == 0) ? "Even" : "Odd";
35
36         // Check if prime
37         $primeMsg = isPrime($row) ? "<br><small>(Prime)</small>" : "";
38
39         // Cell content
40         echo "<td>";
41         echo number_format($div, 2) . "<br>";
42         echo "<small>$oddEven $primeMsg</small>";
43         echo "</td>";
44     }
45     echo "</tr>";
46 }
47 echo "</table>";
48
49 ?>
```

Task d:

➤ Classes and Objects

```

task_d_1.php
1  <?php
2  // Define a class
3  class Vehicle {
4      public $brand;
5      public $color;
6
7      // Constructor method
8      public function __construct($brand, $color) {
9          $this->brand = $brand;
10         $this->color = $color;
11     }
12
13     // Method to display info
14     public function displayInfo() {
15         echo "This vehicle is a $this->color $this->brand.<br>";
16     }
17 }
18
19 // Create objects from the class
20 $car = new Vehicle("Toyota", "Red");
21 $bike = new Vehicle("Honda", "Blue");
22
23 // Use object methods
24 $car->displayInfo();
25 $bike->displayInfo();
26 ?>

```

Results:

➤ Inheritance

```
task_d_2.php
1  <?php
2  class Vehicle {
3      public $brand;
4      public $color;
5      public function __construct($brand, $color) {
6          $this->brand = $brand;
7          $this->color = $color;
8      }
9      public function displayInfo() {
10         echo "This vehicle is a $this->color $this->brand.<br>";
11     }
12 }
13 class Car extends Vehicle {
14     public $doors;
15     public function __construct($brand, $color, $doors) {
16         parent::__construct($brand, $color);
17         $this->doors = $doors;
18     }
19     public function displayInfo() {
20         echo "This car is a $this->color $this->brand with $this->doors doors.<br>";
21     }
22 }
23
24 $myCar = new Car("BMW", "Black", 4);
25 $myCar->displayInfo();
26 ?>
```

Results:

This car is a Black BMW with 4 doors.

➤ Polymorphism

```
task_d_3.php
1  <?php
2  interface Shape {
3      public function area();}
4  class Circle implements Shape {
5      private $radius;
6      public function __construct($radius) {
7          $this->radius = $radius;
8      }
9      public function area() {
10         return pi() * $this->radius * $this->radius;
11     }
12 }
13 class Rectangle implements Shape {
14     private $width;
15     private $height;
16     public function __construct($width, $height) {
17         $this->width = $width;
18         $this->height = $height;
19     }
20     public function area() {
21         return $this->width * $this->height;
22     }
23 }
24 $shapes = [
25     new Circle(5),
26     new Rectangle(4, 6)
27 ];
28 foreach ($shapes as $shape) {
29     echo "Area: " . $shape->area() . "<br>";
30 }
31 ?>
```
